

PARKER VARIANT ADJUSTABLE SAFETY RAZOR INSTRUCTIONS

Congratulations on your purchase of the Parker Variant Adjustable Safety Razor. This razor is a precision tool that will serve you well for many years.

Changing the razor blade is simple and should take only a few seconds.

1. To insert a blade, turn the knob on the bottom of the razor counter clockwise until the cover plate on the top of the razor can be removed. Slide a blade over the screw portion of the cover plate and insert the razor cover plate back into the handle.
2. When reinserting the cover plate, make sure that the notch marking on the side of the cover plate is on the same side of the razor handle as the notch marking which is engraved on the base plate. This is required so the adjustment settings on the razor will calibrate properly. Tighten the knob on the bottom of the razor until the razor cover plate is in the lowest position (lined up at "1").
3. Please be careful not to over tighten the razor.
4. To adjust the razor blade settings, loosen the knob on the bottom of the razor. The number under the round indicator on the razor handle indicates the setting: "1" is the mildest setting and "5" is the most aggressive.

We recommend starting with a setting of "1" when first learning to use the Parker Variant Adjustable Safety Razor. As you gain experience, you can change the setting if so desired.
